

Digibellow with mounted 4x Magnified Lens

# DIGIBELLOW FOR LCD MONITORS

Sunlight, bright lights or reflections can make viewing an LCD screen difficult if not impossible. Our range of Screen Shades for Digital Cameras have been specifically designed to help eliminate the problems of glare on LCD screens.

Specially designed for positioning over the LCD screen on the back of the digital camera, the Digital Screen Shade successfully shades the screen from any glare, be it from the sun or artificial lighting, ensuring a clear view of the subject and an accurate preview of the picture. It is quick and easy to use and its unique self-supporting technology means that once manipulated, it will stay rigidly in place. The Digital Screen Shade is available in four sizes and will fit most digital cameras.

Digibellow

The Digital Screen Shade is also available with either a high quality glass magnifier removable or fixed.

## Digital Screen Shade with High Quality Glass Magnifier

The high quality glass 4x multicoated magnifier works like a loupe, allowing you to put your eye right up to the magnifier to view the LCD screen.

Digibellow with removable 4x Magnified Lens
