

As a further demonstration of our commitment to the photographer and to accommodate the characteristics of the new types of lenses, all our previous constructive experience has gone into completely re-designing our old SLV model into the present T30 camera. The lenses can be shifted as much as 30mm which ensures the virtual elimination of converging lines in the image. Possibility to turn the camera body upside down by using the incorporated quick mount.

Basic format 6x7/6x9, Graflock type mount, coupling the rotating system by a quick 4 point, 8° of rotation. Click stop every 90°. Setting of the format in the 360° without discontinuity. A lever can block the rotation in order to facilitate the ease of both attaching and removing accessories. Interchangeable backs also available in 6x12 and 4x5" formats.

This compact apparatus of great precision and solidity has a Silvestri bayonet mount to fit the systems' lenses. The versatility, simplicity and lightness of this modular camera makes setting up both quick and easy. A wide range of Schneider and Rodenstock lenses from 35mm to 180mm, and an extensive range of accessories for every need, completes the systems' versatility.

Centre filters

Linear or with concentric degradation centre filters. They are useful to compensate the light fall on the sides of the format: unavoidable with the modern superwideangle lenses. Absorption from 1,5 to 2 stops.

Bayonet mounts

Adapter plate

Extension rings

Available types:
normal, preshifted, shiftable, variable with bellow.

Table for the use of Schneider Lenses for T30

Filter holders

The two filter holders are projected to avoid mechanical vignetting when using the wideangle lenses of the last generation. The filter holders have a four pliers support device that holds the filter flat. They are click mounted on the lenses by threaded adapter rings. The mounting device allows the rotation and the shifting of the centre filter in the desired position. The filter holders are movable from one lens to the other with great rapidity. Silvestri wide-angle filter holders for gelatines and acrylics 75x75mm. Silvestri wide-angle filter holders for gelatines and acrylics 100x100mm.

Adapter rings

Adapter rings to mount the filter holders on different lenses.

Bellow for the backs when using lenses over 100mm.

Viewing devices

Shift viewfinder

This unique Galilean viewfinder simulates the lens shifting through sliding and interchangeable masks. The obtained datum is reported on the shifting of the camera body. The viewfinder, which covers about 110°, has a lever visible inside the viewfinder. Interchangeable masks are available for the various lenses/formats film.

120° viewfinder

High quality and great adjustment viewfinder. Wide field angle, very useful with the very new superwideangle lenses. High precision lever visible inside the viewfinder. Interchangeable format masks with click mount, which can be rotated for the horizontal-vertical positioning.

Monocular 6x9 reflex viewer, rotating framing, tilt system to increase the luminosity. Leather bellow for the viewing, 6x9 framing with an incorporated magnifying lens, for the 6x9 format. 4x5" viewing bellow with a magnifying lens for the whole format; an additional lens can be inserted for the focusing. Door for the 4x5" back (Horseman)

Leather cap with a magnifying lens for the 6x7-6x9cm format.

Leather cap with a magnifying lens for the 6x12cm format.

Folding Hood for 4x5" format.

Focusing bellow

Extension bellow for the lenses over 100mm for the 6x9 format.

Adapter backs

Graflock type Standard 6x7-6x9 back, suits Horseman and Mamiya RB film-holders. The 6x12 backs are sold complete of the ground glass and the leather bellow with a magnifying glass. They fit the camera's rotating disc with no need of extension rings.

Polaroid backs

6x7/6x9

6x12 (56x105mm)

Adapters for digital back

The Silvestri system has several sliding adapters with Hasselblad type and H1 attachments available. Their use helps in framing and focusing on the ground glass keeping the sensor in line and protected. By the Lemo multi-polar plug the back can be connected to the Silvestri remote control units code 7052K and 7053K which interface the digital back to the functions of the shutters and of other devices.

The possibility of capturing an image in two shots, actually doubles the size of the sensor, two shots with the 4x4 sensor produce a file of about 90MB by stitching the two images with software.

Code 7020 6x6 sliding adapter - **Code 7021** One or two shots Manual Sliding Back for 4x4 e 4x5 e 24x36 Digital sensors with 6X6 Hasselblad type attachment.

Technical data

Camera dimensions	13x17x7cm with the standard back	Available formats	6x12cm and 4x5"
Weight	1 Kg with the standard back	Lens mounting	Silvestri bayonet
Vertical shift	30 mm upwards	Shutters	Copal 0, Copal Press, Prontor Magnetic
	30 mm downwards by revolving the camera	Format Back	360° rotating system, click stop every 90°
Basic format	6x7/6x9 cm	Film Holder	Graflock type attachment
